Do I need a wallet to use the Permission Agent?

Permission Support - 2025-10-06 - Permission Agent

No external wallet is required.

When you create your Permission account, you automatically get a Permission Wallet — a secure, built-in wallet that stores your ASK rewards and is ready to use immediately.

You can start earning right away without setting up anything extra.

If you prefer to connect your own external wallet, you can do that easily at any time. ASK is an EVM-compatible token, so it works with most standard Ethereum wallets.

Connecting an external wallet allows you to move your ASK onto the broader blockchain ecosystem, trade, or use it with other applications.

Popular compatible wallets include:

- MetaMask
- Coinbase
- SafePal
- Uniswap

How to Connect an External Wallet:

- Get a compatible wallet (e.g., download MetaMask from its official site).
- Open your wallet and use the “Add Token” or “Import Token” feature.
- Enter the ASK token contract address for your preferred network (Base or Polygon).
- See Contract Address for details.
- Once added, your wallet can receive and send ASK.

With the Permission Wallet built in, you can start earning immediately — and with EVM compatibility, you have the flexibility to take your ASK anywhere in the Ethereum ecosystem.
