How is Permission different from other parental control apps?

Permission Support - 2026-04-21 - AI for the Family

Most parental control apps focus on blocking content, alerts, logs, and screen limits.

Permission is built around insight and guidance.

Instead of overwhelming you with notifications, Permission identififes and summarizes patterns, highlights meaningful changes, and helps you understand what's actually happening online — so you can respond thoughtfully.

It also includes positive reinforcement tools like ASK rewards, giving families a way to motivate healthy digital habits, not just restrict them.
