What can I use a .ASK Web3 domain for?

Permission Support - 2026-10-30 - Web3 domain name

Your .ASK domain is your Web3 identity — simple, human-readable, and blockchain-powered.

Use it to replace long wallet addresses with something like yourname.ask when sending or receiving crypto.Instead of copying complex strings, just share your domain and receive tokens with ease.

 Works with MetaMask (via Snap)

To start using your .ASK domain for transactions directly in MetaMask:

- Install the Unstoppable Resolution Snap for MetaMask.
- Once installed, you'll be able to resolve Web3 domains like .ASK directly in MetaMask.
- Send and receive crypto using your domain — just like a username.

And this is just the beginning — more features and integrations are coming soon. Stay tuned!
