What can the Permission agent do?

Permission Support - 2026-02-10 - [Permission Agent](#)

The Permission Agent runs seamlessly in your browser. It manages your consent across the digital world, spots moments where your data has value, and makes sure you get paid.

Right now, the Agent learns from your responses, preferences, and interactions - such as surveys, intent signals, and browsing behavior.

It can:

- Spot moments when your data has value
- Present relevant opportunities based on your interests
- Secure your explicit consent before sharing
