What does Permission actually do for my family?

Permission Support - 2026-10-30 - AI for the Family

Permission helps parents understand and notice meaningful patterns and shifts in their child’s digital life - across apps and online environments - without reading private messages or hovering over every interaction. As platforms evolve and AI systems shape what kids see, Permission translates digital behavior into clear, actionable insights so parents can stay informed, while teaching and supporting their children with confidence. It’s designed to reduce fear, guesswork, and conflict — and strengthen connection instead.
